Ideas that change health care

Is your hospital dementia friendly?

EHE Environmental Assessment Tool

The EHE assessment tools

In order to help as many health and care organisations as possible to develop more supportive design for people with dementia, The King's Fund has developed a suite of dementia friendly assessment tools for use in care settings. Tools are available for wards; areas of hospitals where patients are ambulatory such as clinics; care homes; extra care housing and health centres.

How to use the hospital assessment tool

The assessment tool can be used by a single individual but involving others who have a different perspective, for example; people with dementia or a family member; clinical, managerial or estates staff; or dementia specialists, can offer valuable opportunities for gaining different views on the care environment and how to improve it. Completing the tool together can also encourage constructive conversations about the philosophy and purpose of care.

The assessment tool contains seven sections and a set of questions to prompt discussions and should be completed in full. Walk around the area being assessed and consider each of the questions in turn. Give each question a score out of five, where five indicates that it is met completely and one indicates it is barely met.

A summary sheet has been provided at the end of the assessment tool which should help pinpoint the areas that might be considered for initial improvement. Notes about how others have used the results, together with The King's Fund's overarching design principles for dementia friendly design, are reproduced at the end of the tool.

How the tool was developed

The first assessment tool for the ward environment was developed in collaboration with NHS trusts participating in The King's Fund's Enhancing the Healing Environment (EHE) programme. Since then over 70 care organisations have been involved in field testing the tools.

The tools have been informed by research evidence, best practice and over 300 survey responses from those that have used the tools in practice. Each of the sections draws on this evidence to develop a rationale for effecting change in care environments. These rationales also address the visuospatial problems often associated with dementia.

For further details go to www.kingsfund.org.uk/ dementia

Before using the tool

Before carrying out the assessment please ensure that all relevant management backing has been secured to build support and commitment to the results.

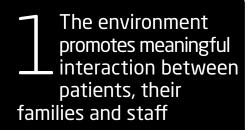

It may also be useful to take photographs as these can be used to mark progress and act as a record of improvements. If photographs are taken all relevant permissions need to be obtained.

If you would like to provide any feedback on the tool or to contact us please email **ehe@kingsfund.org.uk**

Uncared for and unwelcoming spaces can cause anxiety and provoke concerns in patients and their relatives about the standards of care. The arrangement of furniture provides clues as to the purpose of the space. There should be a choice of seating, older people are likely to need chairs with arms, and arranging chairs in clusters will encourage conversation.

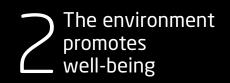

Questions

Please score each answer from 1 - 5
(1=barely met, 5=totally met)

- A Does the approach to the hospital/ department look and feel welcoming?
- **B** Is there an obvious reception desk?
- C Does the hospital/department give a good first impression i.e. does it look clean, tidy and cared for?
- Is seating arranged in clusters to encourage conversation and support from an accompanying carer?
- **E** Is there a choice of seating provided including chairs with arms?
- **F** Is there space for wheelchairs and those accompanying patients to sit together?

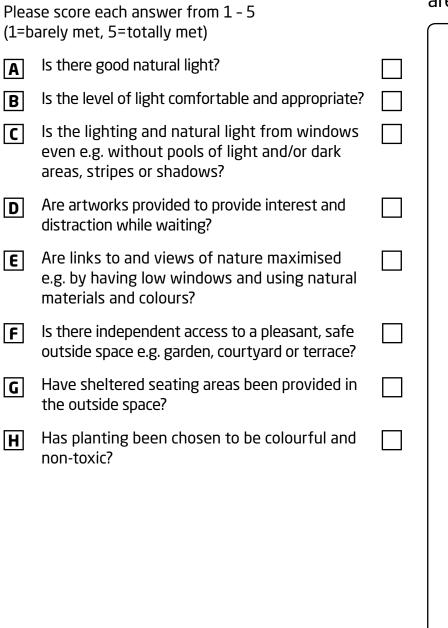

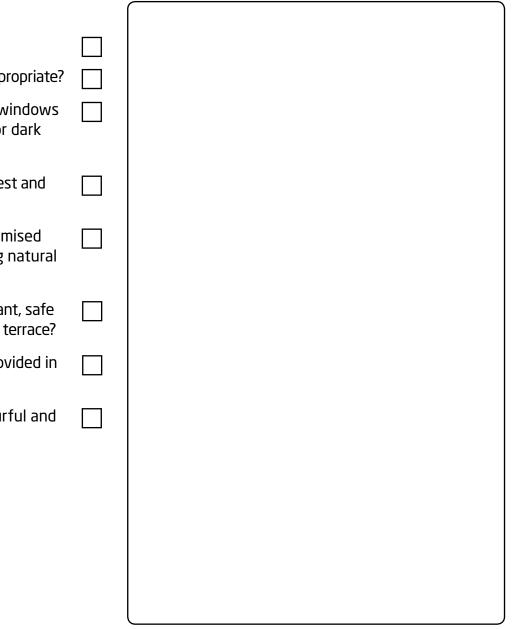

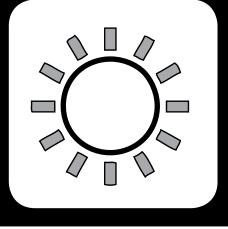

Questions

Rationale

Older people need higher light levels and people with dementia may interpret shadows or dark areas as holes in the floor and try to step over them. Stripes on flooring could be confusing and disorientating. Appropriate artworks can provide interest while waiting. Views and access to the outside are essential for wellbeing.

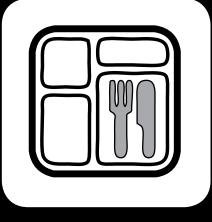

B The environment encourages active engagement of people with dementia in their care

Rationale

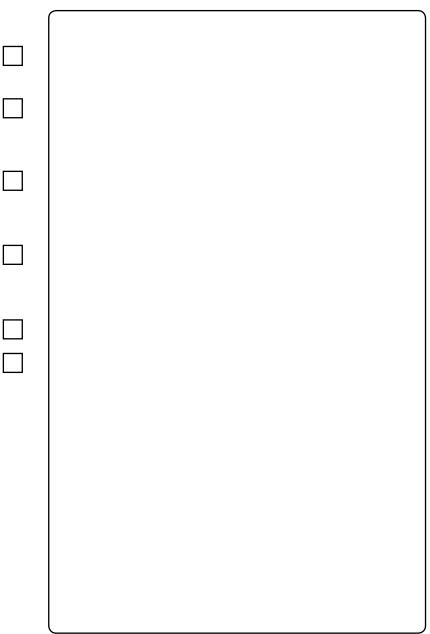

People with dementia can become very anxious when dealing with distractions and interruptions. Keeping them calm will enable them to better participate in their assessment. Distress can be eased by providing a quiet waiting area or room. It will also be reassuring if they are able to have their carer with them. Encouraging eating and drinking is an important part of caring for people with dementia.

Questions

Please score each answer from 1 - 5 (1=barely met, 5=totally met)

- A Is there a separate quieter seating area for older patients and carers in the department?
- B Is there a designated assessment area for older people in a quieter area of the hospital/ department?
- **C** Is there a dedicated treatment room/cubicle for older people in a quieter area of the hospital/department?
- **D** Are there appropriate facilities to enable a relative/carer to be present throughout the assessment and episode of care?
- **E** Are snacks and hot drinks available?
- **F** Is water freely available and independently accessible?

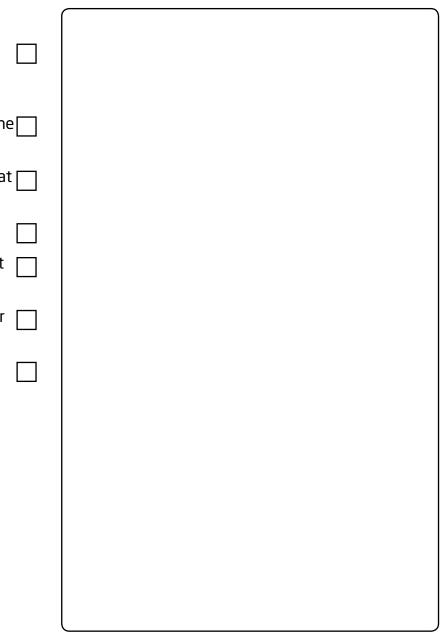

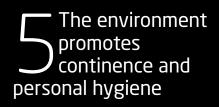

Being able to walk independently is important. Safety can be enhanced by providing handrails and small seating areas where people can rest. People with dementia may interpret shiny floors as being wet or slippery and changes in flooring colour as something to step over. Speckles or pebble effects in flooring could look like pieces of litter. Interesting artworks will encourage mobility as well as helping people find their way around.

Questions

Please score each answer from 1 - 5 (1=barely met, 5=totally met)

- Is the flooring matt rather than shiny and of a consistent colour i.e. does not have speckles, pebble effects or stripes?
- **B** Is the flooring in a colour that contrasts with the walls and furniture?
- **C** Are the handrails in the corridors in a colour that contrasts with the walls?
- **D** Is it possible to grasp the handrails properly?
- **E** Are there small seating areas for people to rest along corridors?
- **F** Are there points of interest e.g. photographs or [tactile artworks?
- **G** Are lifts easy to find and do they have large control buttons?

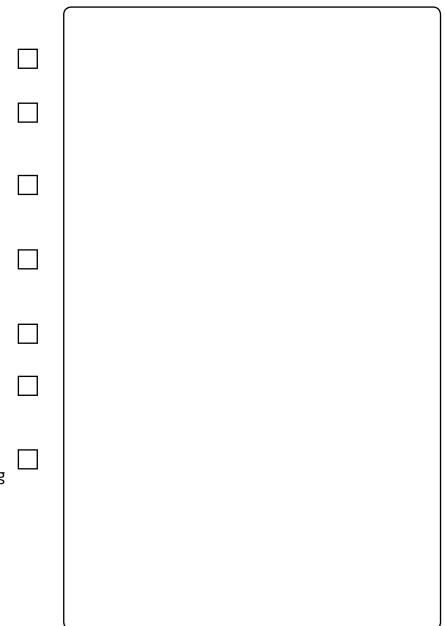

Not being able to find the toilet provokes anxiety and using the same signs and door colours to denote all toilets will help people find them more easily. Ensuring good colour contrast on sanitary fittings will make toilets and basins easier to see and use. Traditional and familiar designs will help ease anxiety and promote self-care. Being plunged into darkness if sensor lights go out can be very frightening.

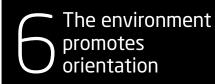

Questions

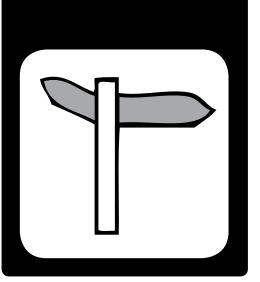

Please score each answer from 1 – 5
(1=barely met, 5=totally met)

- A Can the signs to the toilets be seen from all areas?
- B Are all toilet doors painted in a single distinctive colour and do they have the same clear signage?
- C Are the toilet seats, flush handles and rails in a colour that contrasts with the toilet/ bathroom walls and floor?
- Are the taps clearly marked as hot and cold and are they and the toilet flushes of traditional design?
- **E** Are basins and toilet roll holders of familiar design?
- F Is there easy access to a toilet big enough to allow space for a wheelchair and carers to assist with the door closed?
- G If sensor lights have been installed do they allow sufficient time for completion of toileting or washing?

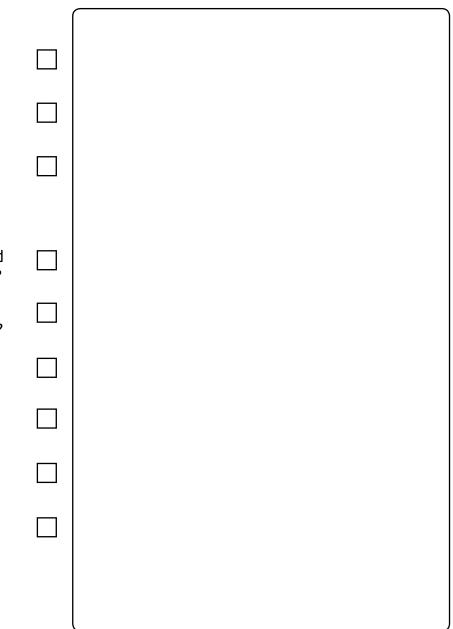

People with dementia are likely to become agitated in unfamiliar surroundings. Providing visual clues and prompts, including accent colours and artworks, to help them find their way around is particularly important. Signs using both pictures and text need to be placed at a height where they can easily be seen. Signs should be placed on doors not beside them. Providing clocks and calendars will help with orientation. Strong patterns on wall coverings or furnishings can be misinterpreted. Signs indicating the name/type of department will help with orientation.

Questions

Please score each answer from 1 - 5 (1=barely met, 5=totally met)

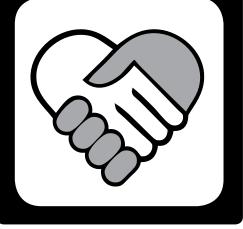

- A Do doors have a clear or transparent vision panel to show where they lead to?
- **B** Are signs of a good size and a contrasting colour so as to be seen easily?
- C Do signs e.g. for toilets use both pictures and words and are they hung at a height (approximately 4 foot/1.2m) that makes viewing them easy?
- **D** Have colours, numbers or signage been used to clearly identify each floor of the building?
- **E** Have strong patterns been avoided in wall coverings, curtains, furnishings and screens?
- F Are pictures/ objects and/or colours used to help patients find their way around?
- **G** Is an easy to read internal hospital map available?
- **H** Is there a large face clock easily visible in all areas?
- Is there signage showing the name of the hospital and the department?

The environment promotes calm, safety and security

Rationale

Clutter and distractions, including notices, can cause added confusion and should be avoided. Noise can make concentration difficult and can increase anxiety. Locked doors and window restrictors can lead to frustration and anger when they cannot be opened. All staff should be familiar with current statutory and regulatory requirements for Deprivation of Liberty Safeguards.

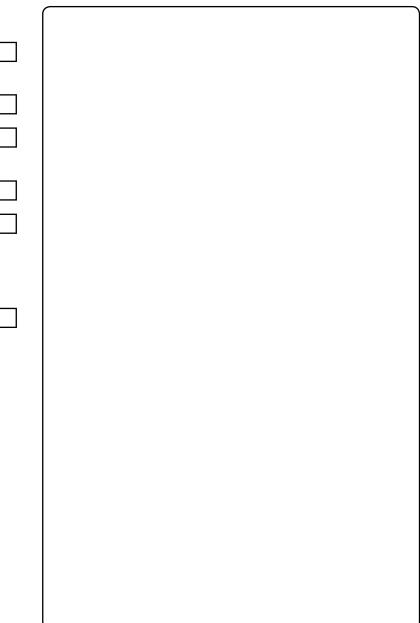

Questions

D

Please score each answer from 1 - 5 (1=barely met, 5=totally met)

- Are notices kept to a minimum to avoid distraction and confusion?
- **B** Are spaces clutter free?
- C Have noise absorbent surfaces been used e.g. on floors and ceilings, to aid noise reduction?
 - Is equipment on display kept to a minimum?
- **E** Are doors to exits clearly marked but 'staff only' areas disguised e.g. by painting the doors and door handles in the same colours as the walls/ continuing the handrail across the door?
- F Are all hazardous liquids and solids e.g. cleaning [materials, locked away?

Please add your scores for each criterion here	A B C D E F G H I
1 The environment promotes meaningful interaction between patients, their families and staff	
2 The environment promotes well-being	
3 The environment encourages active engagement of people with dementia in their care	
4 The environment promotes mobility	
5 The environment promotes continence and personal hygiene	
6 The environment promotes orientation	
7 The environment promotes calm, safety and security	
How the results might be used	How others have used their results
Scores can be benchmarked against other similar areas in the organisation or more widely to look at comparisons and to highlight particular priorities for improvement. Remember it often the simple things that can make a big difference such de-cluttering spaces or providing small seating areas. Simila	results to: is as • secure finance from their boards to improve the care environment

local photographic competition can produce stunning artworks.

If there are low scores in a particular area, think what action can

with others. If the scores are low overall this should help inform discussions on the need for environmental improvements with

be taken immediately and what actions need to be addressed

senior management in the organisation.

- educate staff and help change attitudes
- improve signage, flooring and colour schemes as part of maintenance programmes.

Overarching design principles

The design principles focus on promoting well-being and independence rather than providing detailed room by room guidance. They have been developed as a result of the EHE programme and bring together best practice in creating more supportive care environments for people with cognitive problems and dementia. The principles are drawn from a number of sources, including research evidence and the learning gained from changes tested in a range of care environments. www.kingsfund.org.uk/sites/files/ kf/EHE-developing-supportivedesign-for-people-with-dementiabibliography1.pdf

Each of the five sections contains a list of design elements that are known to support, encourage and enable people with dementia in care settings. It is unlikely that all the elements can be addressed at the same time unless a new build or comprehensive refurbishment is being planned. However, many of the principles are simple, can be introduced with very little financial outlay and are known to be helpful in creating a more supportive physical environment for people with dementia and those that care for them.

MEANINGFUL ACTIVITY Can be encouraged by providing

Books and games Drinks and snacks Gardens Handrails Interactive artworks Memorabilia Places to walk Resting points

FAMILIARITY Can be enabled by

Domestic scale seating and dining areas Personal and self care items Photographs and memory boxes Recognisable sanitary ware Traditional crockery and cutlery

OUTCOMES

Easing decision-making Reducing agitation and distress Encouraging independence and social interaction Promoting safety Enabling activities of daily living

WAYFINDING Can be helped by using Accent colours Artworks Identification of beds, bedrooms and social spaces Signage - pictures and text

LEGIBILITY Can be aided by ensuring Clear sight lines Discreet security measures Even lighting

Matt, even coloured, flooring Noise reduction Uncluttered spaces

ORIENTATION Can be supported by

Artworks that reflect the seasons Calendars Large face clocks Natural light Outside spaces Photographs of local scenes Clear signs and signage Views of nature Visible staff
