KING'S FUND COLLEGE

TRAVELLING FELLOWSHIP

M J D LINCOLN

VISIT TO CHOGORIA HOSPITAL

KENYA

OCTOBER/NOVEMBER 1986

PREFACE

In September 1986 I was fortunate enough to obtain a travelling fellowship from the King's Fund College. The purpose of the fellowship was to visit Chogoria Hospital in Kenya in order to examine and improve financial systems and management reporting arrangements.

This document details the work carried out during my stay in Kenya and also, I hope, gives a feeling of the deep sense of satisfaction, achievement and well being which working at Chogoria gave me.

I would like to record my thanks to the King's Fund College for making my trip possible and also to the staff of Chogoria Hospital for the kindness and hospitality extended to me during my visit.

M J D LINCOLN MAY 87

CHAPTER I

INTO THE UNKNOWN !!

INTRODUCTION

"Mike Lincoln" screamed the sign, as I emerged bleary-eyed from the arrival hall after an all night flight from London to Nairobi. Fame at last I thought, as I looked above the sign to see the smiling face which constituted my welcoming committee to Kenya.

I soon learnt that the face belonged to a driver called Njagi who was in Nairobi from Chogoria to collect medical supplies and was also charged with my collection and delivery. As we drove from the airport into Nairobi he managed to convey to me the understanding of a "slight" problem he was experiencing in collecting supplies these days. The slight annoyance revolved around the fact that traders were reluctant to give him goods because Chogoria Hospital were not paying their bills. His first port of call was a Pharmacy who had refused him goods the day before. He speculated that if I went this time I would have more success.

Having driven deep into the back streets of Nairobi (seemingly a million miles from the gentility of Cheltenham) we finally arrived at the Pharmacy in question. Reluctant to leave my worldly goods in the truck which had now attracted the attention of the streets inhabitants I was finally persuaded to mount the three flights of stairs to the Pharmacy to plead Chogoria's case.

After introducing myself to the proprietor and, hopefully looking more confident than I felt, I began to explain that I was an accountant just arrived from England to sort out Chogoria's financial problems. Yes, he had heard of the National Health Service and had actually spent some time studying in London which provided a useful conversation point. He seemed genuinely impressed that Chogoria were actually to have an accountant to look into their financial affairs and after exchanging further pleasantries and sympathising with him over the fact that Chogoria's bills were unpaid for the last nine months I emerged triumphant followed by a porter carrying the much-needed drugs. I was soon to learn that this supplier was one of the lucky ones with invoices only nine months old. Other creditors I later discovered had unpaid invoices which extended back over a three year period.

At this point I should explain that my visit to Kenya was as a result of a link that had been developed between Gloucester Health Authority and Chorgoria Hospital. The link had first been established in 1985 when Ken Jarrold, the District's General Manager, had visited Kenya to speak at a conference. On that occasion he had been impressed with the work being undertaken at Chogoria and had learnt of the difficulties they were experiencing with their finances. Subsequently, it was agreed to progress their request for the secondment of an accountant to Chogoria. Being the most dispensable member of staff within the Finance Department it was agreed that I would do the honourable thing and "volunteer" — a decision which suprisingly enough I was later not to regret.

During 1985 we had the pleasure of a visit to Gloucester from the Medical Officer in charge at Chogoria, Dr Scott Murray. Scott gave a slide presentation in the Post Graduate Centre of Chogoria and the work that it undertakes. Part of the presentation included details of the indigenous diseases which are prevalent in Chogoria's catchment area. These included malaria, leprosy, and the jiggers. At this point in the presentation the Director of Finance informed me that he intended to advertise my job before I went as he didn't fancy my chances of coming back. As a self-confessed coward neither did I and I resolved to try and find a job in another District as soon as possible in order that I could withdraw without losing face. In the event this aspiration was not to be realised and so it was that in October 1986 I found myself on a plane to Kenya faced with the daunting prospect of working for two months in the hell-on-earth that men call Africa and armed only with a copy of the complete works of Edgar Rice Burroughs.

FIRST IMPRESSIONS

My first impressions of Chogoria were of noise, colour and the smell of a Jakaranda tree. The noise came from the seemingly crowds of people shopping at the small open market just outside the gates of the hospital, all engaged in competing with each other to strike the best possible bargain for the produce on offer. The noise level seemed to be complemented by the vividly coloured "kangas" which most of the women wore either as skirts, dresses or for carrying small babies on their backs. Fused with this sight was the pungent smell of a beautiful Jakaranda tree which at that time wa in full blossom.

My accommodation, rather than being the mud hut on stilts which I had imagined, was an adequately furnished room in a building called the "guest house". This had been built and used by engineers working on a nearby road some years before. The house had subsequently been bequeathed to the hospital and was used by a succession of visitors ranging from staff from other hospitals from within and without Kenya come to examine service delivery, to representatives from funding agencies and minor government officials. Over my two months in the guest house I was fortunate therefore to be exposed to a wide range of languages and culture.

Scott Murray's children took it upon themselves to help me settle into Chogoria by whisking me off to see the rats which had just been caught (rats being a continuing problem at Dr Murray's house) and also their collection of insects including some huge stag beetles. Apart form avoiding the rats I was also told not to mind the guards with bows and arrows and dogs who patrol the hospital and staff compound at night in order to ward off thieves. I was advised however to carry a torch in order that I could be recognised as the guards were known to be particularly zealous in carrying out their duties.

Further reassurance that Chorgoria was a "home from home" came the following day when I was given directions for a scenic walk around the periphery of Chogoria which would take me through maize fields, coffee plantations, banana groves and back to the hospital via the sewerage lagoons being careful all the time to keep to the path and not to fall into the open graves at the back of the mortuary. Needless to say the latter part of my walk was spent with eyes firmly fixed on the path.

CHAPTER II

CHOGORIA HOSPITAL

Chogoria Hospital is situated 140 miles north east of Nairobi on the foothills of Mount Kenya. Although it is just a few miles south of the Equator its altitude of 5,000 feet makes for a very pleasant climate.

The Hospital was established in 1922 as a Church of England Mission and in 1969 underwent a scheme of modernisation thanks mainly to a local "Harambee". An Harambee is "a pulling together" of all the local people to contribute to a specific cause. Harambees are a major source of fund raising for most community facilities including hospitals, schools and clinics. The success of these fund raising projects underlines the generosity of the Kenyan people who are often prepared to give all the money they have in order to help the community.

Chorgoria is managed by the Presbyterian Church of East Africa (PCEA) and serves a widespread rural catchment area of approximately 300,000 people. The Kenyan population growth rate of over 4% per annum is one of the highest in the world and the average age is only 16 years. This of course, places great strain on the hospital and community facilities.

Pressure on the land around Chogoria is intense as it is a tradition that male children when married live and farm on the family "shamba" or small holding. The population growth means that farming is often carried out in ever smaller units and is consequently very uneconomic. Income in some areas also reduces as the land of the family decreases which has a marked ability on the population to pay for medical services. Payment is the main source of income for Chogoria Hospital.

The Hospital has 294 beds in surgical, medical and maternity (including a special care baby unit where the temperature level is maintained by a domestic fan heater). There is also a modern surgical theatre, outpatient department (including dental and ophthalamic facilities) and a nurse training school where approximately 150 entrolled community nurses are in training.

One of Chogoria's greatest achievements has been the establishment of a thriving Community Health Department (CHD). This was set up in 1969 and is based on a network of 27 daily clinics and 6 one-monthly clinics. The activities of the department are split into four units:-

- (a) Service Delivery
- (b) Community based activities
- (c) Youth Education Programme
- (d) Income generating activities

a) Service Delivery - at each of the daily clinics one integrated nurse (usually an enrolled community nurse with additional training) offers all services. The nurses are assisted by one or two clinic helpers who have mainly "on the job training". At five of the clinics community nurse pupils (from the Chogoria training school) are sent to gain practical experience of offering health services in a community setting. All of the services are offered every day and in any clinic a mother can have a wound dressed, have a child immunised and collect her family planning pills, all in one visit. This is integrated nursing in action as the nurse will also act as administrator, pharmacist as well as being involved in day to day clinic maintenance.

Patients pay a small charge for the clinic services (around 20p) and also an additional charge for any drugs, these are on a cost plus basis. Family planning aids are supplied through the government and are dispensed free of charge. The clinics are entirely self-supporting and have a policy of charging cost plus for curative services in order to subsidise preventative ones.

Many of the clinics are in remote locations, even by Kenyan standards, and the construction of many of the buildings is literally mud huts with straw roofs. The facilities however, appear in no way to detract from the quality of service which is provided. Because of clinic remoteness nursing staff often sleep in at the clinic which apart from being a practical necessity also provides a degree of security for the cash and drugs at the clinic. Over the course of a month, between visits to the hospital to pay in, a clinic even in a poor region can accumulate up to one hundred pound which provides a temptation to the most sober of the community's citizens. The fear of attack and robbery is a practical and real fear for many of the nurses.

The living-in allowance for the nurses is approximately £4 per month and one could only admire their forebearance in being able to endure the conditions that many of them slept in. One helper took quite a delight in showing me his sleeping accommodation in order to rattle under his bed and release a flight of bats which represented his normal sleeping companions.

b) Community Based Activities - this part of the community health department is funded by the Swedish International Development Agency (S.I.D.A). Its aim is to promote greater involvement in health activities by the local people. In the Western world our image of health services is very heavily "doctor centred" with the result that ordinary people used to take little or no part in protecting their own health. Only in the last few years has this pattern begun to change with involvement in fitness campaigns, concern about unhealthy diets and people giving up smoking in large numbers.

In developing countries the "doctor-centred" approach to health care is completely unrealistic due to shortage of resources and the only way to work towards the world health organisation's goal of" health for all" by the year 2000 is to develop a much more community centred approach to health care. This approach is more commonly known as community based health care.

With the assistance of S.I.D.A. Chogoria has been trying to develop much greater community involvement in health issues, particularly concentrating on what activities local communities can undertake for themselves. The idea of self help is not a new concept in Kenya and this again is a demonstration of the Harambee principle. Almost all of the clinic buildings and staff houses have been erected by the effort of local health committees who raise funds and then hand over the completed buildings to be staffed by the hospitals. After the initial fund raising these committees usually stopped meeting and took no further action regarding the health of their communities. The emphasis has been on trying to change the concept away from the limited role of building and these communities have now been renamed and retrained. In their wider role they are know as Area Health Committees (A.H.C's).

Each A.H.C. is encouraged to make an assessment of the major health problems in the local area and to work out appropriate ways of tackling their problems. Almost all of the A.H.C's have recruited suitable people to be trained as volunteer health workers (known as family health workers) and some A.H.C's have also identified the traditional midwives in their areas who conduct 50% to 60% of all births, these have been trained as Traditional Birth Attendants (T.B.A's).

Volunteers and T.B.A's are a vital bridge between the local people who need health services and the professional service providers in the clinics and hospital. Those people who most need the services such as the poor and disadvantaged, the illiterate, the at risk family etc. are those are least likely to use the services. Using a volunteer worker who lives in the area and is well known to the people it is possible to overcome many of the obstacles and the uptake of services is much higher. In addition when a client fails to come for a clinic appointment, say for immunisation, or for family planning a volunteer will call at the home and remind the family concerned. Using this system it is possible to have even up to 60% of all defaulters returning to complete the service.

An additional advantage of this approach is that the local people are must more directly involved in health issues. Many communities gain confidence and are able to go on to tackle other problems in community life and make improvements. They may learn how to put pressure on policy makers and find ways of bringing other development projects to the area. One example of this is the large number of self help small scale water projects that A.H.C's are developing.

c) Youth Education Programme - this programme is funded by Family Planning International Association (F.P.I.A) and seeks to tackle the increasing problem of illegitimate teenage pregnancies (which currently comprise 20% of all births in the area). The programme seeks to train teachers (primary and secondary school), church leaders (of any denomination), and peer group leaders. The aim is that those trained will then teach the youth, that they come into contact with, the lessons known as family life education. Local cultural attitudes are strongly against the giving of contraceptives to unmarried people and although attitudes are changing, it was not possible, until recently, for trainees to teach specifically about family planning in the schools and the lessons had to be limited to "talking around the subject" using lessons such as population dynamics, problems of the unmarried mother and her child, sexually transmitted diseases etc.

Recently the programme have been seeking to give young people more consutructive outlets for their energies and has been given sports equipment grants to various clubs and training people in preparation for employment. With approximately 75% of all Kenyans under the age of 25 years and approximately one million babies being born annually the young people are a crucial target group for the future.

d) Income Generating Activities — over the past few years the economic situation of the local people has been changing from year to year. Many local farmers are dependent on commodities such as coffee, tea, cotton and tobacco for their cash income. With the drought and famine of 1984/85 and the fact that coffee prices tend to be very volatile on the world market the general economic situation has been deteriorating locally. Added to these problems are the ever increasing population pressures and many local communities, especially in the poor, low altitude areas are asking for support in developing ways of generating alternative sources of income. Thus a number of communities are developing several small scale projects mainly based on agriculture.

It is speculated that the development of these activities will be very important for the future of both the community health programme and the work of the volunteers although from my observations I could only conclude that there was a very tenuous link between the health care of the community and income generation on it's present scale.

CHOGORIA MANAGEMENT STRUCTURE

The daily running of the hospital is overseen by the Hospital Administrative Team (H.A.T) which consists of the Medical Officer in charge (Chairman), the Hospital Administrator, the Matron, the Senior Tutor of the Nursing School and the Director of the Community Health Department. The H.A.T. meet on a weekly basis and can be considered to be the equivalent of a District Management Group. They are concerned with the implementation of policy although tend to be primarily wrapped up with the day—to—day problems which arise in any largish hospital. The problems in Chogoria are currently primarily financial and many of their agenda items were concerned with the lack or drugs, gauze, dressings and other necessary items.

The H.A.T. report to the Hospital Management Committee which meet four times a year. Apart from supervising policy making the Hospital Management Committee are also involved with interviewing entrants to the Nurse Training School. This may appear to be suprising but it has to be borne in mind that the Management Committee is made up primarily of clegy or lay-clergy. They are therefore anxious to ensure that potential entrants to the school not only have a reasonable scholastic background but can also demonstrate that they are practising christians.

The Management Committee is in turn answerable to the Presbyterian Church of East Africa (P.C.E.A) hospital's board which also supervises Chogoria's sister hospitals at Kikuya and Tumutumu.

Christianity is central to Chogoria and the church in the hospital exists very much hand in hand. Many of the Senior Staff particularly medical are at Chogoria because of their christian beliefs and are paid by the Presbyterian Church of Scotland. They are therefore overseas in a missionary and well as a medical role. The hospital itself is constructed around the chapel which is used not only for Sunday services but also extensively during the week. An example of this is Monday morning prayers which start at 7.30 am and to which all hospital staff are expected to attend. Monday prayers act as the forum for hospital announcements and provide an opportunity for staff to discuss issues which are affecting the hospital.

At one of the meetings I was given the opportunity to present an outline of the financial difficulties facing the hospital. This was carried out through an interpreter although the use of a make-shift flip chart with easy-to-read bar charts of income and expenditure and assets and liabilities soon got the general message home which was greeted with general alarm. As a conclusion to the presentation I went into a rallying call which I hoped would emphasise the Harambee "pulling together" principle and how, if we worked hard and diligently we could overcome the problems. My sentiments were then reinforced by the Medical Officer and I began to visualise the painting which would appear on the hospital wall in years to come depicting the day that Chogoria turned the financial corner.

My musings were brought to earth when the self-appointed spokesman for the Wanuchi (the ordinary workers) stood up and explained that in a Kenyan household which had difficulties, financial or otherwise, it was not the custom to tell the children of these difficulties lest it caused unhappiness. In retrospect I felt this remark spoke volumes of the way the hospital management were perceived. Nothwithstanding these comments, the outline of the hospital's difficulties proved to be a success insomuch as it helped to inject a new air of financial reality within the hospital and paved the way to introducing many economy measures.

Apart from Monday morning prayers there were regular prayer meetings and bible studies during the course of the week and it was customary to commence and conclude many meetings with a prayer. The Christian Union, which is made up predominantly of members of the Nursing School is also extremely active within the hospital and provides one of the few outlets for the energies of these young people.

Coming into a very religious environment such as that at Chogoria can prove for some people to be a far greater culture shock than actually working in an overseas country. However, I experienced absolutely no difficulty in working in this environment and I found the enthusiasm of the christian medical staff extremely contagious and one could not help but admire their unselfish aims of helping their fellowmen whilst working very often in extremely adverse conditions.

CHAPTER III

THE PROBLEMS

A. FINANCIAL

When the auditors reported on the accounts for the 1985 financial year they revealed a loss of approximately £60,000 (11% of income). This compared with a small loss in 1984 of £4,000 (0.8% of income). The figures were obviously a cause of great concern to the Hospital's management and whilst it was known that the hospital had financial problems the scale of the 1985 loss was unexpected. The Hospital's auditors, Carr, Stanyr, Sims of Nairobi, set out the position in their report on the accounts:-

"The overall deficit after depreciation has risen by more than fifteen times the 1984 figure. It is very clear that the result is disasterous and that such a trend cannot continue. The result clearly showed that for the year under review the hospital was running at a significant loss and strong measures must be implemented if the hospital is to survice and maintain the level of patient care which the Chogoria region has come to expect".

The Audit Report went on to note a number of weaknesses in accounting control although it was evident that control whilst being a contributory factor to the situation was not one of the main ones. Three main financial problems could be identified:-

- Increased running costs due to general inflation but expecially due to a government declared salary increase which raised salary costs by approximately 40% over a two year period. The hospital, whilst not a government institution is expected by staff to implement national increases in salary levels.
- 2. A decrease in the government grant from 16% of running costs to 9% or running costs in real terms over a two year period.
- 3. The inability to increase patient charges in line with the above factors. The population around Chogoria are generally involved in small scale agriculture and therefore not directly linked into the cash economy. The majority of the population therefore saw no immediate benefit from general wage increases. To attempt to raise charges to reflect the above increases would have been directly counter productive in that the majority of patients would not have been able to afford these charges and would simply have stayed away. Therefore overall income would have been reduced.

It is also worth noting that during 1986 the government had declared a reduction in the working week from $5\frac{1}{2}$ to 5 days. The announcement surprised everybody with its immediacy and had an obvious impact on the hospital's overheads. Regarding the pay awards it is interesting to note the similarity of difficulty between Chogoria's position and that of the NHS which has had to deal with a shortfall of pay and price funding in recent years. In the NHS the normal approach to dealing with this problem has been either to hold back on development and redirect growth monies or efficiency savings to pay and price shortfalls. Clearly Chogoria was not in the position of having growth monies and in an environment where gauze is being recycled it is difficult to stimulate thought into making more savings.

A 1% efficiency saving on the Authority's revenue cash limit is considered an achievement. In order to get Chogoria to financial viability would have required an efficiency saving in the order of 10%.

RELIABLE AND TIMELY FINANCIAL INFORMATION В.

While Chogoria had a finance department it was evident that the level of accounting expertise within the department was not very high. Monthly information of expenditure again budget was produced but the information was often late in production and unreliable. The hospital's auditors were usually in the position at their annual visit of drawing together schedules and books and attempting to combine these into a set of accounts which could be presented to management. These accounts were regarded by the finance staff as the "auditors accounts" and the staff were often unable to explain balances and entries within these accounts. I had many talks with the staff explaining to them that the role of the auditors was not to write up the books of account but merely to verify their accuracy. It was important to push home the message that the hospital relied on their producing accurate accounts on a monthly basis and not waiting till the end of the year for the auditors to arrive.

STAFF - LACK OF TRAINING AND LOW MORALE C.

It soon became evident to me that staff morale in the finance section was at a low ebb. The reasons for this included the following:-

- Little or no finance training 1)
- Limited on the job training
- 2) A backlog of work in some of the sections which represented a 3) daunting and unassailable task to the staff concerned.
- A realisation that the hospitals financial affairs were in 4) difficulties but being unable to identify solutions to problems.

Any successful organisation survives on an infrastructure of sound systems and well-trained and motivated staff. I considered it vital therefore that with limited time available it was important to improve staff performance and ensure that the financial information being produced was credible and accurate. I therefore spent considerable time in sitting down with the clerks and finding out exactly what they did and why they did it. At the same time as this suggesting and implementing improvements in the procedures and trying to instill in the staff a sense of responsibility and commitment.

CHAPTER IV

MAIN AREAS OF FINANCIAL AND ADMINISTRATIVE SERVICES

The following are the main areas of financial and administrative services at Chogoria:

- Outpatient Registration а.
- Outpatient fee collection
- Inpatient fee collection C.
- Inpatient liaison А.
- Voucher recording invoicing of coffee societies e. and other organistations
- Debtors control f.
- Payments cashiering g.
- Income Receipts h.
- Maintenance of General Ledger i.
- Creditor Payments j.
- Wages Payments k.

In order that staff could be aware of exactly what their responsibilities were and what was expected of them a job description was drawn up for all of the principal posts. This was done following analysis of each job and appropriate amendment. The job descriptions are given as Annex I and the appropriate reference number appears in brackets after the job titles below

Outpatient Registration (Annex 1A) а.

All patients presenting at Chogoria, unless they are emergencies, must first register as an outpatient. Apart from recording patient details the clerk also ensures that the patient (where possible) pays a deposit for the services which they will receive. This was 15 shillings (about 75p) but was increased to 20 shillings (about £1) during my visit. The patient is given a unique outpatient number and also a form called a prescription (see Annex 2) which lists the areas of medical services that an outpatient may use, viz:

Doctor X Ray Department Laboratory Theatre Drugs

Approximately half of the patients able to pay do not have cash but instead pay by a voucher usually from a Coffee Society. The Coffee Society voucher will state that the person named on the voucher can receive medical treatment up to the value stated. The voucher carries an identifying number which relates to the society or organisation. Chogoria's catchment area there are approximately 20 coffee societies.

The system works along the lines that the coffee growers are given an advance on the produce delivered to the Coffee Society in the form of the voucher which can then be used to buy medical services. After the patient has received treatment an invoice is sent to the Coffee Society by the hospital stating the patient's name, the voucher number and the cost of the treatment received. Within the hospital the vouchers are recorded and numbered upon receipt and by introducing checks within the procedure an audit trail was available through to the invoice clerk. This has expanded upon under the section dealing with voucher invoicing (see (e) below).

If the patient cannot pay either by cash or voucher he must receive a "debt" which is at the discretion of the administrator. Getting the authorisation of the administrator to a debt may seem extreme however, it is human nature to avoid paying if at all possible and therefore many people who perhaps could pay will try not to. The administrator has a sound local knowledge and is viewed therefore as being in the best position to be able to distinguish between those who cant and wont pay. I was never aware of a person being refused medical treatment on the grounds that they could not pay and this is borne out by the accounts which show that in 1985 seven hundred thousand shillings (£35,000) about 10% of income was written off as bad debts.

Having been given a prescription form and having paid a deposit the patient then proceeds to the outpatient waiting area to see a clinical officer. A clinical officer has basic medical skills but is not a fully qualified doctor. It is the job of the clinical officer to carry out initial examination and if this reveals that the patient's symptoms are more serious then can be dealt with then the patient is forwarded to a qualified doctor. Some of the clinical officers who had been singled out for further training came from for example a nursing background. It was disappointing to note that after being trained and having gained practical experience many clinical officers had set up a practice in the community in direct competition to the hospital. They often carried out abortions which would not be allowed at Chogoria. The result of this practice was often fatal for the patient concerned.

Either the clinical officer or the doctor can prescribe drugs order radiology tests, pathology tests or can forward patients for minor procedures. Each service is charged separately and this is the job of the outpatient fee collector.

b. Outpatient Fee Collector (Annex 1B)

Whilst accountants in the NHS struggle to capture patient related costing information, it was fascinating to see that this information was available in a Third World Mission Hospital. The information was not being provided as a cost control mechanism or medical audit tool but simply to charge the patient for the services they were being provided with.

Outpatient charges were as follows:-

Clinical Officer Examination - 10 shillings (50p) - this was five shillings but was doubled whilst I was at Chogoria on the basis that the increased costs would be hidden in the basic deposit (see above), and would not deter patients from coming to the hospital. It was anticipated that this would result in increased income of 24,000 shillings per annum.

Doctor - 15 shillings (75p)

Laboratory - 10 shillings (50p) per test

X-Ray - cost dependent upon X-Ray but around 50 shillings (£2.50)

Procedures - cost dependent on procedure, e.g. minor wound suture 50 shillings (£2.50)

Drugs - cost plus dependent on drug, e.g. paracetamol a mark-up of around 400% whereas phenobarbitone for epileptics would be given free because of the patient's condition.

It is the function of the outpatient fee collector to total the charges and to collect the money from the patient. This is after costing drugs and procedures, if appropriate. Despite the fact that there were several foolscap pages of drug costs, the clerks doing the work soon became familiar with prices.

In order to speed up the administration of collecting fees, the possibility of introducing a standard charge for drugs for all outpatients was considered. The results of the exercise are shown in Annex 3. It became clear during this exercise that each outpatient was paying on average around 50 shillings (£2.50) for drugs. The alternative to individual pricing of a standard charge would it was considered on balance be to deter patients from coming to the hospital if they knew that they would be faced with a drug cost of 50 shillings no matter what. The fact that they would on average have to pay 50 shillings anyway for drugs seemed to be eased by the charge being related specifically to the drugs they were being prescribed. Additionally, they also had the option of refusing the drugs after medical examination on the grounds that they could not or would not pay.

The outpatient fee collector also has the job of ensuring that for voucher payments the amount to be charged to the appropriate organisation or society was recorded on the voucher. Additionally the clerk would record the medical costs of all debts given for outpatients and also the cost of free treatment to staff.

c. In Patient Fee Collection (Annex 1C)

The In Patient Fee Collector is responsible for:-

- (a) Registration and arranging for an invoice to be instigated upon admission of a patient to hospital. This is in order to identify patients as they are admitted and whenever possible collect a deposit.
- (b) Calculation of the cost of the patient's stay in hospital and collection of the income.

One of the characteristics of the African patient which was immediately evident to me is the patience which they exhibit when waiting for treatment or to be registered. I was however extremely dismayed at the extent to which patients were expected to queue which for a non emergency in patient paying a cash/voucher deposit meant queuing of a minimum of three times. Again the patient would queue three times upon discharge.

By altering the flow of patients and by relocating the inpatient clerks together with the outpatient clerks in order to facilitate cash collection and to give receipts, we were able to reduce the number of times a patient had to queue to once upon admission and once upon discharge.

On discharge the patient takes his registration card together with the prescription sheet showing all drugs dispensed to the clerk. Identified on the card will be the code of any operation/procedures undertaken which enables the clerk to identify the appropriate charge. Also recorded on the sheet will be the gas used in any procedure, saline drips, etc.

The clerk, having computed the charges of the individual items together with the standard day charges of:-

30 shillings (fl.50) per day for adults 20 shillings (fl.00) per day for children

will then attempt to recover the amount from the patient (less any deposit paid) either by cash or by voucher. As with many outpatients a good proportion of inpatients cannot pay. The hospital is therefore faced with the dilemma of keeping the patient in hospital and incurring further debt until the patient's relations produce some money, or discharging the patient with a debt in the hope that he or she will pay at some time in the future. It is one of the jobs of the Administrator to judge each situation on it's merits and arrive at a decision. More often than not the patient is discharged and the amount owed written off as a bad debt.

A further class of inpatient which provides a considerable source of income to the hospital are those registered with the National Health Insurance Fund (NHIF). These are akin to private patients in reverse. The patients discussed so far have been patients paying for charges from their own resources. NHIF patients are those who by virtue of earning over a certain limit have to pay NHIF contributions to the government and are therefore entitled to an element of free medical treatment at non government hospitals. These patients are housed in single rooms and enjoy slightly better food than ordinary patients. The accommodation charges 150 shillings per night (10 times greater than ordinary patients) but this is recoverable directly from the government by the hospital. The procedure for recovering this money is extremely bureaucratic and the NHIF office will reject a claim for the slightest reason e.g. if the initial of the patient is shown wrongly.

Each month the assistant hospital administrator spends at least a day in Nairobi processing these claims through the various departments of the NHIF office and doing his best to supply any additional information that may be needed. The majority of patients paying NHIF are those in the professional classes e.g. teachers.

Prior to my visit NHIF patients did not pay any hospital costs themselves because of the fact that most of them could recover excess costs of treatment from their Staff Association it was decided to ask the patients to pay for drugs, operation costs, drips etc. in fact, anything over and above the basic accommodation costs. Initially there was a degree of resistance to this on the basis that the patients would have to wait several weeks before being re-imbursed by the Staff Association. I believe that the protestations have now diminished without a wholesale drop-off in the number of NHIF patients presenting at Chogoria.

d. In Patient Liaison Clerk (Annex 1D)

This was a new post which we managed to establish from staff savings in other areas. As many patients, such as emergencies are admitted out of normal hours then the procedure for admittance was frequently bypassed and indeed some patients such as maternity were thought to try and gain admittance during the night in order that they could avoid paying a deposit and perhaps escape payment altogether.

It is the job of the In patient Liaison Clerk to visit the wards and identify patients who have been admitted without payment of the required deposit. The clerk will then try to obtain the deposit either from the patient of relatives. Without jeopardising the patients treatment the clerk will also liaise with medical staff on the ward to make them aware of patients who have not paid and to advise on patients who are possible bad debts. The doctor can then decide whether treatment need to be continued or if the patient can be discharged.

This, no doubt, seems extremely mercenary to the outsider looking in but, it must be borne in mind, we are talking about a mission hospital trying to survive on an extremely low level of income, mainly generated by patient charges, and trying to do the greatest good with the little money which is available. It is self evident therefore that free treatment must in the main be given to those patients who are real emergencies and unable to pay.

Voucher Clerk (Annex 1E)

Approximately half of all patients pay by voucher. The financial procedure which I set up for dealing with these is shown in Appendix 8 and this area is a good example where a simple changing of procedures enable considerable staff savings to be made.

An average of approximately 80 vouchers are dealt with daily and of these about 10 relate to in patients. The procedure was for the clerks to sort these into society order and to then put these on to lever arch files, outpatients/inpatients altogether. They would then go through the files invoicing the outpatients and leaving these on file marked with the invoice number. Inpatient vouchers tended to get left on the file because the clerk did not know if the patient had been discharged and that the Coffee Society or organisation could be invoiced.

This system was changed so that at the beginning of each day the Voucher Clerk sorted the previous days vouchers into:-

- Society
- Inpatients/Outpatients within society.

The outpatient vouchers were then invoiced immediately and put on to a completed file. This work was done during the morning. Inpatient vouchers were then placed on a separate file and during the afternoon the Voucher Clerk liaised with the Inpatient Clerk to agree those patients who had been discharged and consequently the vouchers for which invoices could be raised. After invoicing the voucher was transferred to the completed file for that society or organisation.

By adopting this procedure:-

- a. All Outpatient vouchers were invoiced immediately helping to speed up cash flow.
- b. Filing and sorting were kept to a mimimum.
- c. Outstanding vouchers for Inpatients were easily dealt with by the clerk and the number outstanding readily able to be monitored by management.

The most productive part of revising the system was that the number of clerks in the section was reduced from four to one and a system of individual accountability for work outstanding readily established.

Debtors Control (Annexes 1F(a) and 1F(b)) f.

This area of work was wrongly called credit control as it embraced the much narrower area of work of debtors control. Basically the section deals with the documentation for NHIF patients and recording the invoices produced by the voucher clerk in the debtors monthly ledger and control ledger. The section also raises invoices for rental of staff houses and purchases by staff from stores etc. It would normally have been prudent to discourage staff purchases but in a locality which was distant from shopping facilities this was not always possible.

Debtors control was an area which I devoted a lot of my time to as it was clear that debt recovery was not being managed and consequently large sums of money being lost to the hospital.

Basically the steps needed within the section were as follows:-

- Getting the work up to date and identifying the real amount outstanding to the hospital.
- Amending the system in order to improve work flows. 2.
- Education of the staff involved. 3.
- Imposition of discipline in order to keep the system up to date. 4.

Two aspects of the work done in this area are worth drawing out, these are, the aged analysis of debts outstanding and the computerisation of the debtors control.

The aged analysis is a reference to how much of the total debt outstanding related to any particular month. Thus a total amount outstanding of 100 shilling would be shown on the monthly statement broken down perhaps as follows:-

	KSHS
March	30,000 20,000
April June	
July August September	40,000 30,000

By totalling all of the outstanding debt in this way management can see how old the debt is and concentrate action for recovery on the oldest debt. From this type of analysis it became clear that many coffee societies were paying off recent debt but leaving old debts outstanding, presumably in the hope that they would be forgotten and written off as had been the case before. This simple system helped to direct management attention to this problem and hopefully prevent it occurring in the future.

One of my priorities at Chogoria was to put the general ledger of the accounts system on to computer using a package called "OMNICRON". The system was to sit on an IMB compatible (Compaq). Unfortunately the General Ledger was just that and did not have a debtors module. However by using the account code for the chart of accounts, which had been established, in a flexible way I was able to bring the details of the debtors on to the computerised system.

The account code within the system consists of six digits:-

eg. 110000 Debtors Control

By nominating ll as the Debtors field the other part of the code was used as follows:-

111001 111002	-	Chogoria Society Kiriani Society)	COFFEE SOCIETIES
112001 112002	<u>-</u>	Chogoria Boarding Primary Mutindwa)	SCHOOLS
113001 113002		Maua Hospital Fund Associates)	ORGANISATIONS
114001 114002	-	Adrine Ciamati Betty Veitch)	STAFF
115001 115002	-	Mugambi Maneme Julius Mbae)	NON STAFF

Thus the amount outstanding could be monitored using this coding structure which was obviously valuable management information capable of being extracted and manipulated. The computerisation of the general ledger is dealt with in more detail in Chapter V_{\bullet}

g. Payments Cashier (Annex 1G)

A number of problems have occurred in Chogoria in the recent past relating to the cashiering function which had traditionally been carried out by one person. Leaving one person in charge of receiving cash and paying out did not make for an adequate separation of duties and consequently left the cashier in a position to potentially manipulate funds. During my time at Chogoria we therefore took the opportunity to split the cashiering function into two posts and to augment each of these with other duties.

The Payments Cashier, as the title implies, is the person responsible for maintaining an accurate record of all claims for Petty Cash and other payments and for also ensuring that claims are correctly certified. The main areas of payment are:-

- a. Petty Cash for small local purchases
- b. Small subsistence repayments to student nurses
- c. Payments to creditors
- d. Floats for subsistence and travel

Floats and subsistence for travel relates to payments given to drivers in advance of their incurring expenditure. This is because wage levels are not sufficient to enable individuals to incur the expenditure themselves and then claim reimbursement. Unfortunately a suitable system of making staff account for their floats did not exist other than the occasional purge and therefore after discussion with the hospital accountant I installed a procedure which ultimately deducted the float from the persons pay within a limited period of time.

One further aspect of the Payment Cashier's job which we established was for him to select on a weekly basis twenty random inpatient invoices and to check these for accuracy of charges at recovery. This is another example of trying to provide an independent check within the overall financial system. However anyone with even a basic knowledge of accounting will know that checks such as these and the overall principal of internal check does not allow for collusion.

Unfortunately this frequently happens in Kenya as in other African countries and often between more than two people. Additionally there is at the moment not the social stigma attaching to dishonesty that we would find in a developed country. The combination of these factors means that the prevention and detection of fraud is by no means straight forward.

h. Cashier Income Receivable/General Ledger Clerk (Annex IH)

This person is responsible for the receipt of all monies such as payments from Debtors (eg. Coffee Societies) and grants and donations. Additionally the Clerk will receive, once a month, cash payments from the outlying clinics which is usually brought in by a nurse together with his/her receipt book which the clerk totals and issues a receipt for the amount received. Every day the Income Clerk also receives cash payments from the Inpatient/Outpatients clerks. These are collected via electronic tills which have a till-roll which the clerk can marry the total money collected against. The Cashier has custody of the only zeroising key for the tills which he resets at the beginning of each day.

The receipt (and payment) of cash is through a basic kalamazoo system which generates sequential pre-numbered receipts at the same time as creating a fast copy for the cash book.

As the recording of income is by no means a full time job the opportunity was taken to incorporate other duties within the post including the maintenance of the manual General Ledger, the trial balance and the preparation of the monthly income/expenditure statements.

j. Creditor Payments Clerk (Annex 1J)

The opening paragraphs of this report dealt with the problems that the hospital were experiencing in obtaining goods and services from suppliers. The difficulty obviously related in the main to an inability to pay but at the same time there existed no accurate details of the total amount outstanding to creditors.

This situation had been brought about by a clerk leaving at the beginning of the financial year and the clerk who was nominated to replace him having no training and no understanding of the tasks which she was supposed to undertake. The results were:-

- a. No accurate record of Creditor balances for the beginning of the period.
- b. For the first six months of 1986 cash payments had been recorded as expenditure within the accounts. From July onwards this system had been replaced by a token one of new invoices being recorded as creditors. The result was that for the first part of the financial year expenditure was greatly understated because goods and services were being received and not paid for. The folly of combining expendiure and payments within the same accounting system during a period of limited creditor payments underlines the lack of formal accounting expertise available to the hospital.
- No accurate record for management of the Creditors outstanding at the end of each period.

In order to remedy this situation we spent a fruitful two days getting every known invoice together and recording these within the appropriate creditors ledger until we had what we considered to be the most accurate situation of known creditors. Having gained that ground and educated the creditors clerk to understand the importance of accurately recording invoices and their treatment in the accounts, I took the view that discretion is the better part of valour and did not try to introduce the concept of accruals and prepayments at that stage. This was however, dealt with later on in the book-keeping and accounts classes which I held and which gave me a great deal of personal satisfaction.

Having established the amount outstanding for each creditor and the timescale over which the debts extended (some more than 3 years) the manual Creditors Ledger was then brought up to date. Thereafter inputs to the ledger became routine through the maintenance of the creditors day book. As with the debtors control the opportunity was taken to use the account code within the computerised chart of accounts to establish codes for each creditor. This approach had the same advantage as the debtors in ensuring that information was available to management as a by product of running the ledger system.

One other duty which I gave to the Creditors Clerk was the payment of local fruit and vegetable suppliers. On Tuesday and Thursday of each week local ladies would bring produce to the hospital to sell (mainly bananas). The ladies appeared to be generally elderly but having tried to lift a branch of bananas myself I rapidly came to the conclusion that they were extremely strong. Many of the ladies would walk for miles, from early morning, with these heavy weights on their backs in order to sell them for a few pence. Sometimes the hospital had too many suppliers arrive in which case several luckless growers were faced with the dilemma of leaving them to rot or trying to sell them elsewhere locally.

The procedure for paying the growers was for the storeman to receive the goods, to weigh them and to then prepare a schedule showing:-

- a. The grower's name
- b. The produce sold and the weight
- c. The cost per kilo (determined by the storekeeper)
- d. The total amount owed.

The storekeeper would then take the list to the office where the total amount to be paid would be calculated and given to the storeman for him to pay out to the growers. As the growers were unable to sign the schedule they invariably put a thumb print against their name. This was a ritual which I considered completely useless in terms of providing any financial control but which seemed to afford the old ladies so much pleasure that I was loathe to dispense with it.

Clearly the system was wide open to abuse by the storekeeper and I therefore arranged for the creditor payments clerk to take on the responsible task of paying the growers as part of her duties.

k. Wages Clerks

Between 1985 and 1986 the proportion of total expenditure spent on wages rose from 46% to 54%. This reflects the level of public wage rises referred to earlier. Of the 400 employees at Chogoria all were paid monthly and most of them on a standard monthly rate without overtime or enhancement. The system for payment is based on a manual kalamazoo system and this is an area where computerisation would bring considerable benefit. Unfortunately the limited time which I had at Chogoria did not enable me to identify and install such a system.

Generally I was impressed with the calibre of the two clerks working in the section and this is probably the only area of hospital finance where I did not make changes as the procedures were generally sound if somewhat laborious. One area where we did tighten up related to deduction from payroll for debts owed by staff for goods received from stores, telephone calls, advances etc. It had often been the case that lists had been supplied to the payroll office asking them to make such deductions. However individuals had then requested the clerks not to action the deductions and they had frequently complied with the requests. The clerks were therefore clearly instructed that on no account were they to reduce, amend or to otherwise alter requested deductions other than on the personal instruction of the Medical Officer in Charge.

1. Hospital Accountant (Annex 1L)

The Hospital Accountant's duties encompassed all of the functions set out above. In addition to exercising a supervisory role the accountant was responsible for producing month-end accounts and dealing with periodic claiming of grants from funding agencies. Given the skills of the particular individual occupying the post it was clear that an adequate level of supervision was not being exercised and therefore a narrower range of duties was given to the accountant as set out in Annex lL.

It was vital however to strengthen the expertise of the finance function and this was done by recruiting a Financial Controller. The person appointed had spent some time studying and working in the United States and although I spent only a only few days working with him before I left I was confident that his appointment would have a major impact on the finance discipline in Chogoria. The job description for the post of Financial Controller is set out in Appendix 1M.

CHAPTER V

IMPROVING THE FINANCIAL SITUATION - SOWING THE SEEDS

Staff Training

During the weeks spent with the clerks analysing their work and getting manual records and books and accounts up to date I also set about giving the staff some formal book-keeping and accounting experience. This was done through a mixture of accounting lessons in the classroom (borrowed from the training school) and then back in the office situation taking the theory and putting it into practice. Additionally staff attending the lessons were expected to do homework. This approach to training proved to be very successful and I was extremely pleased with the progress that was made in the time available. Those staff who attended all lessons progressed from basic double entry book-keeping through to the production of the Trading Profit and Loss Account and Balance Sheet and finally an outline of interpretation of accounts - clearly a lot of ground to cover in two months. Shortly before I left improvised certificates were presented to six of the staff who had done particularly well; these could not have been better received had the recipients been given university degrees.

Computerisation of the Accounts

Prior to my arrival at Chogoria the hospital, and particularly the community health department, had become involved in a programme of computerisation. The programme had been financed primarily through United States Aid which had purchased a number of micro-computers (IBM Compatibles) and also financed the development of an extensive software package for community statistics (immunisations, clinic attendances, etc.).

In conjunction with the hospital auditors it had been agreed to move towards a system of computerised accounting using an accounting package called "OMNICRON". The Auditors spent time implementing the stores module and it was part of my brief whilst at Chogoria to install the main general ledger module.

The coding structure making up the chart of accounts for the system was divided into 8 digits:-

- A two digit cost centre showing
- where the money is spent
- where money is received
- balance sheet entries
- A six digit account code showing
- what the money has been spent on
- what income has been received
- what the balance sheet entries relate to

The chart of accounts of the coding structure is given in Annex 4. The work involved in updating the accounts prior to transfer on to the computer proved to be by far and away more time consuming than transferring them to the computer system. However, without striking an accurate trial balance it was not worth considering making the transfer. At the same time it was vital to ensure that as far as possible the staff involved in providing the inputs for the computer system were aware of what was expected of them and that we did not build up a "pack of cards" which would collapse due to lack of staff training.

The Seminar held to bring all of the staff involved in the system together (and also some of the information users) proved to be a great success and the documentation which I produced for the Seminar is given in Annex 5.

A standard set of output reports on this system is given in Annex 6 and from reports and printouts I have received since leaving Chogoria the timetable for producing the computerised accounts has been maintained and consequently up to date management information provided.

Within the documentation reference is made to the Data Processing Manager. This was an appointment made during my time at Chogoria and we were lucky to attract a local person who had experience of programming and the systems through working in a bureau in Nairobi. The job description which I drew up for the post is given in Annex lN.

COST SAVINGS

Clearly good accounts do not create cost savings but only serve to identify areas of overspending and overall financial performance. One of the areas where there appear to be considerable scope for saving was on food consumption and indeed a close scrutiny of the methods of requisitioning meals for the wards and issuing kitchen supplies from stock showed that by amending the procedures savings of approximately 320,000 Kenyan shillings per annum (£16,000). This is approximately $2\frac{1}{2}\%$ of Chogoria's budget. A report to the Medical Officer in Charge towards achieving these savings is shown in Annex 9. Further potential savings were identified by improving the information on debt recovery. As part of the computerisation of the debtors system individual numbers were allocated to each debtor. Of the approximately 200 debtors held on the ledger 80% of the balance outstanding related to only 19 debtors (coffee societies plus national health insurance fund). It was recognised that it was important therefore to concentrate effort on these rather than spread the management effort too thinly.

A further element in savings came from implementing a policy of compulsory retirement for staff over 55. The introduction of this policy resulted in a reduction of approximately 20 staff.

ESPRIT DE CORPS

Good working relationships and the development of a team spirit are important to the efficient running of any organisation. In Chogoria by introducing staff training, improving systems and adopting a "approach to achieving goals" a noticeable improvement in morale was discernable. As much as any of these things however staff morale was improved through a very simple initative — organising a football match, doctors v administrative staff.

This was held on a local school pitch after the normal day and generated such interest that the hospital was left practically deserted. Not only did the hospital staff who were not playing attend as spectators but also what appeared to be most of the population of Chogoria. As luck would have it the administrative team won and have gone on to challenge other local teams (with what success I do not know).

FINANCIAL PROCEDURES

As well as clear job descriptions it is desirable for staff to work to financial procedures outlining the detailed steps in performing a task. Unfortunately there was not sufficient time to write all of these but an example of one of the procedures written is given in Annex 8.

AUDIT TEST CHECKS

As an important part of monitoring events after my departure the Medical Officer in Charge was keen to involve himself in Audit Test Checks on a sample basis. This was to enable him to keep a finger on the pulse of what was happening and to ascertain whether procedures were being adhered to. A further benefit from this was the element of staff knowing that they could be audited at any time and therefore discouraging fraud.

A check list of Audit tests is given in Annex 7.

CHAPTER VI

FINAL THOUGHTS

I would hope that this report does not leave the impression that my visit to Chogoria was a case of putting in and not taking out and indeed, I learnt a great deal while I was there. How many accountants in the NHS have had the opportunity to do ward rounds, listening through stethoscopes, and having diagnoses explained to them. I was also able to attend a session in the operating theatre which I found to be an invaluable experience.

On one of my visits to the community we spent all day walking through the bush from one straw-hutted village to another inspecing hole-in-the-ground latrines and advising on the construction of open fires to prevent children being burnt. Although this may sound mundane it was a fascinating experience and provided me with an opportunity to see an Africa that as a tourist I would never see. At one point during the day we had a monsoon type rainfall which flooded a stream we had to cross over. One of our guides insisted on carrying me across the swollen stream on his back which I am told was a quite hilarious sight and provided great amusement to the rest of the party.

On a professional basis it was fascinating to see the sort of patient related costing information which accountants in the NHS struggle to capture be available as a by-product of the charging mechanism. It made me realise that many of the barriers to moving forward are often self imposed and that necessity or willpower can often break these down.

But perhaps the most important lesson that Chogoria gave me is the value of working together for a common goal (which in Chogoria's case is literally the survival of the hospital). At Chogoria there were no barriers that could not be surmounted, no professional ideology that could not be questioned, only a wish to serve the patients in the best possible way by making the limited resources available stretch as far as possible. Isn't that what we are also working to achieve?

M J D LINCOLN MAY 1987

JOB DESCRIPTION

POST:

FEE COLLECTION CLERK (REGISTRATION)

JOB SUMMARY:

Maintains a daily record of outpatient attendances including patient details. Receives cash relating to deposits.

SPECIFIC DUTIES:

- Responsible for maintaining a daily record of outpatient attendances including the allocation of outpatient numbers.
- Records voucher numbers and voucher details. Forwards vouchers to outpatient collection (Till No 2) for charge recording.
- Responsible for ensuring that all cash deposits received are Till receipted and that cash tallies with Till receipt roll at the end of each day.
- Works flexible hours in order to ensure that registration is covered during coffee breaks and lunch times, works during weekends as appropriate.
- 5. Carries out any duties as required by the Financial Controller.

RELATIONSHIPS: Responsible to the Financial Controller.

NB. It is important that all till receipts relate to a cash payment. The Till must therefore not be opened other than to receive a cash payment (e.g. to change money).

JOB DESCRIPTION

POST:

OUTPATIENT FEE COLLECTOR

JOB SUMMARY:

Responsible for accurately receiving and recording all outpatient income including voucher payments.

SPECIFIC DUTIES:

- Calculates the total cost of each outpatient prescription including detailed drug costs.
- 2. Accurately records the income from patients by analysis of the income elements via the cash register (e.g. 2 = outpatient medical charge, 6 = drugs).
- 3. Ensures that all cash receipts are till receipted and that cash tallies with Till receipt roll at the end of each day.
- 4. Records Till receipt number on prescription for cash payment.
- Indicates on prescription method of payment if not by cash e.g. voucher, debt, staff member, epiliptic etc.
- Records debts given and staff treatment costs as appropriate.
- Receives vouchers from fee collection clerk (registration).
 Allocates voucher number and records details in voucher record book.
- 8. Works flexible hours in order to ensure that Till No 2 is covered during coffee breaks and lunch times. Works weekends as appropriate.
- 9. Carries out any other duties as required by the Financial Controller.

RELATIONSHIPS: Responsible to the Financial Controller.

NB. It is important that all Till receipts relate to a cash payment. The Till must) refore not be opened other than to receive a cash (e.g. to charge monthly).

JOB DESCRIPTION

POST:

INPATIENT FEE COLLECTOR

JOB SUMMARY:

Responsible for recording patient admission details. Ensures that discharged patients are accuraately invoiced for all services received during their stay in hospital.

SPECIFIC DUTIES:

- Allocates an inpatient number to patients upon admission. Records other details as appropriate in the in-patient register.
- Whenever possible obtains a deposit from all patients who are admitted. Raises an invoice and posts invoice number onto patient record card. 2.
- Calculates accurately the cost of all charges to be rendered upon 3. in-patient discharge.
- Records approved debts in the appropriate register.
- Carries out any other duties as required by the Financial Controller. 4. 5.

RELATIONSHIPS: Responsible to the Financial Controller.

JOB DESCRIPTION

POST:

IN-PATIENT LIAISON CLERK

JOB SUMMARY:

Responsible for the identification of in-patients who have been admitted without payment of the required deposit. Creates and updates invoice data and pursues payment.

SPECIFIC DUTIES:

- Provides a continuous liaison between the general office and the wards in relation to payments for in-patient services.
- Identifies in-patient who have been admitted without payment of the required deposit. For such patients allocates an invoice number. 2.
- Updates invoice data and pursues payments at ward level. 3.
- Liaises with medical and other ward staff to clarify services received and to advise on patients who are possible bad debts.
- 5. Assists the inpatient fee collectors as required.
- Carries out any other duties as required by the cashier (income receivable).

RELATIONSHIPS: Responsible to the cashier (income receivable).

JOB DESCRIPTION

POST:

VOUCHER CLERK

JOB SUMMARY:

Responsible for the control and invoicing of all income

related to voucher payments.

SPECIFIC DUTIES:

Assists each evening in the collection and checking of all vouchers received into the hospital fee collecting systems.

- Records and locates any missing vouchers. 2.
- Each morning prepares invoices for all outpatient attendances. Totals invoices and passes to Credit Controller for posting in the day book and 3. despatch.
- Each afternoon prepares voucher invoices for all discharged inpatients.
- Investigates voucher payment queries. 5.
- Carries out any other duties as required by the Credit Controller.

RELATIONSHIPS: Responsible to the Credit Controller.

JOB DESCRIPTION

POST:

CREDIT CONTROLLER

JOB SUMMARY:

Responsible for maintaining a comprehensive and accurate record of all invoices and credit notes raised by the hospital. Monitors balances of debts outstanding and assists in the recovery of all outstanding debts.

SPECIFIC DUTIES:

- Maintains a daily record of all invoices raised. Checks the accuracy of invoices totals.
- Prepares monthly totals for all debtors accounts raised before posting to the debtors control ledger.
- Posts details of cash received relating to sundry debtors in the debtors 3. control ledger.
- Each month checks the accuracy of the individual debtors accounts by balancing to the control total. 4.
- Through the data processing manager allocates new debtors a computer 5. account code.
- Prepares the debtors input schedules for the general ledger computer 6. system.
- Advises the Payroll Section on a monthly basis of all staff accounts unpaid after two months which are to be deducted from salary. 7.
- Prepares credit notes, obtains authorisations, posts in appropriate 8. ledger.
- Prepares monthly debtors statements including the production of the age 9. analysis of debts.
- 10. Identifies and assists in the recovery of all potential bad debts and aged balances.
- 11. Carries out any other duties as required by the financial controller.

RELATIONSHIPS: Responsible to the Financial Controller. Supervises staff in the Credit Control Section.

JOB DESCRIPTION

POST:

CREDIT CONTROL ASSISTANT

JOB SUMMARY:

Assists in maintaining a comprehensive and accurate record of all invoices raised by the hospital.

SPECIAL DUTIES:

- Prepares detailed statements and invoices for all NHIF patients.
- Maintains records of NHIF patients who have been discharged but who have not paid. Actions reminder notes on a monthly basis and advises employers to deduct from salary.
- Prepares summary receipts for patients.
- 4. Updates analysis of accounts paid for major debtors such as coffee societies.
- 5. Assists in the month end posting to debtors control accounts.
- 6. Assists in the preparation of debtors statements including the aged balances.
- 7. Provides cover for voucher clerk during periods of absence.
- 8. Carries out any other duties as required by the Credit Controller.

RELATIONSHIPS: Responsible to the Credit Controller.

JOB DESCRIPTION

POST:

PAYMENTS CASHIER

JOB SUMMARY:

Maintains an accurate record of all vouchers and approved

payments, makes cash payments to claimants.

SPECIFIC DUTIES:

Pays petty cash claims after ensuring that they have the necessary approval.

- Assists in the preparation of payment vouchers in relation to suppliers payments.
- Posts payments in appropriate cash book and ensures that this is balanced
- On a weekly basis selects 20 random in-patient invoices and checks for accuracy of charges. Maintains a record of invoices checked and errors found.
- At the end of each month forwards to the training school a list of students who have paid registration fees. 5.
- Checks the accuracy of monthly payrolls and advances given to staff. Validates advances against personal pay cards. 6.
- Maintains float record cards and actions deductions from payroll on a monthly basis for those staff with outstanding floats. 7.
- Maintains weekly record of cash summary sheet.
- Carries out any other duties as required by the hospital accountant.

RELATIONSHIPS: Responsible to the hospital accountant.

JOB DESCRIPTION

POST:

CASHIER -INCOME RECEIVABLE

/GENERAL LEDGER CLERK

JOB SUMMARY:

Responsible for the proper accounting and receipt of all monies received within the hospital. Maintains the operation of the general ledger including the preparation for computer input

documentation.

SPECIFIC DUTIES:

Maintains cash book receipts on a daily basis.

- Responsible for the banking of all cash/cheques.
- 3. Maintains daily record or cash summary sheet.
- 4. Responsible for ensuring that the general ledger is posted up to date.
- 5. Prepares a monthly trial balance of all accounting entries.
- 6. Assists in the preparation of the monthly statement of income/expenditure against budget.
- Analyses income to correct account codes and cost centres.
- 8. Carries out any other duties as required by the hospital accountant.

RELATIONSHIPS: Responsible to the hospital accountant.

JOB DESCRIPTION

POST:

HOSPITAL ACCOUNTANT

JOB SUMMARY:

Responsible for ensuring that a professional and accurate system of book-keeping and accounting is operating throughout the hospital's financial system. Instigates and maintains procedures which ensure that adequate controls are operating within the system to prevent fraud and misappropriation of hospital funds and property.

SPECIFIC DUTIES:

- Maintains an accurate and up to date record of the hospital's books of account.
- 2. Produces monthly trial balance.
- 3. Produces monthly statement of income and expenditure against the hospital's agreed budget.
- 4. Maintains the operation of the hospital's cash receipts and payments system including personal responsibility for the main safe.
- 5. Produces monthly key financial statistics figures for management.
- Assists in the preparation of the hospital's annual budget.
- 7. Produces the hospital's annual financial accounts and liaises with the hospital's auditors in respect of any agreed adjustment to the figures arising from their recommendations.
- 8. Provides a monthly reconciliation of the hospital's bank account.
- Verifies the accuracy of all data input to the hospital's financial computer systems and ensures that processing schedules are maintained.
- 10. Carries out any other duties as requested by the financial controller.

RELATIONSHIPS: Responsibility to the financial controller.

Responsibility for the supervision of the Cashier (Income receivable)/general ledger clerk and the Cashier (Payments).

JOB DESCRIPTION

POST:

FINANCIAL CONTROLLER

JOB SUMMARY:

The Financial Controller is responsible to the Medical Officer in charge for all financial resources and the systems relating to their management. He maintains a constant review of the use of all resources in relation to the services provided and advises on areas, where cost improvement can be achieved.

SPECIFIC DUTIES:

- Responsible for the maintenance of all financial records and books of account.
- 2. Ensures that monthly accounting schedules and reports are produced by the set dates and maintains the financial input to the computer system in accordance with the agreed timetable.
- Constantly reviews, develops and improves the hospital's financial and other systems.
- 4. Ensures that adequate controls are operating within financial systems in order to reduce the possibility of fraud and misappropriation.
- 5. Produces the hospital's annual budget and advises on deviations from that budget during the course of the year. Takes any agreed action in order to correct undesirable trends.
- 6. Advises on the level of patient charges and takes any necessary action to recover outstanding patient debts.
- Prepares cash budgets.
- 8. Implements any agreed action arising from the audit reports.
- Constantly examines the use of resources in relation to the services provided and advises on areas where there is waste or unnecessary expenditure.
- 10. Provides staff training and promotes improvements in accounting awareness amongst financial staff.
- 11. Through the credit controller ensures that sundry debtors are kept to a minimum especially in relation to coffee societies. Instigates action to recover outstanding debts and develops procedures for identifying and pursuing discharged NHIF patients who have not paid.

JOB DESCRIPTION

POST:

DATA PROCESSING MANAGER

JOB SUMMARY:

Responsible for the operation, maintenance and development of all computer systems within the hospital. Undertakes systems analysis of manual systems and advises on the feasability of computerisation.

SPECIFIC DUTIES:

- 1. Maintains the operation of all computer systems within the hospital.
- Schedules data flows to the computer operation clerks and ensures that adequate batch controls are operating where applicable.
- Responsible for ensuring that financial systems have adequate safeguards within the computer procedures in order to avoid fraud and misappropriation.
- 4. Provides staff training and computer appreciation courses as required.
- Implements arrangements for the safe storage of all computer media and ensures that regular back up procedures are in operation.
- Constantly reviews the use of the hospital's computer resources.
 Reviews the storage of programs and deletes unused, revised, or wrongly stored data.
- 7. Evaluates computer packages and installs as appropriate.
- Undertakes a systems review of the operation of all manual systems and advises on the feasibility of computerisation.
- 9. Liaises with computer suppliers and maintenance companies as required.
- 10. Controls the use of all computer equipment.
- Responsible for a cost effective approach to the purchase and use of computer stationery and other consumables.
- 12. Carries out any other duties as required by the Director (Community Health Department).
- RELATIONSHIPS: Responsible to the Director (Community Health Department).

 Manages all computer operations staff.

GENERAL LEDGER

COMPUTERISATION

INTRODUCTION

The transfer of the general ledger onto the computer will enable management to have flexible, up to date and accurate information. By keeping to the input schedules, discussed later in this document, it will also impose a discipline to produce data requirements during the first few days of each month and thereby tighten up on the "as and when" system which has operated in the past.

Initially the introduction of the computer system may involve extra work because we shall be maintaining our manual records as well as the computer system. However after the first few months of operating when we have sufficient confidence that the computer system is working efficiently we can abandon many of the records which are currently kept viz.

Manual General Ledger Manual Creditors Ledger Manual Debtors Ledger

WHERE ARE WE NOW WITH THE GENERAL LEDGER?

All ledger balances at the 30th September 1986 have now been transferred to computer and a trial balance, income and expenditure statement and balance sheet have been prepared for that date. Additionally all of the input to the ledger system for October has now been entered and we can now produce the trial balance, income and expenditure statement and balance sheet for 31st October 1986.

It is proposed that we continue parallel running (posting to manual records and computer) for November and December and providing that there are no problems abandon some of our manual records from January 1987.

WHAT IS THE GENERAL LEDGER?

When a business has a small number of transactions all of the double entry accounts can be maintained in one book called the ledger. When a business or organisation, such as Chogoria Hospital, is large it is obvious that one ledger is too bulky for convenient use.

The usual solution to this problem is to divide the ledger into its different functions. Thus for personal accounts (the people to whom we sell goods and services and the people from whom we buy goods and services) we have two ledgers. One is called the sales ledger or creditors ledger.

Another function requiring a considerable number of entries is that of receiving and paying out cash. To cover this function the cash and bank accounts are combined and normally kept in reparate ledgers on for cash receipts and one for cash payments. The remaining accounts which are the expenditure and income accounts and the other asset and liability accounts are retained in a ledger called the general ledger (sometimes called the nominal ledger).

In order that we have a complete double entry system in our general ledger a summary account (called a control account) is kept in the general ledger for

- 1. Debtors
- 2. Creditors
- 3. Bank/Cash Receipts
- 4. Bank/Cash Payments

WHAT ARE THE INPUTS TO THE GENERAL LEDGER?

The inputs to the General Ledger are the following:-

- 1. Payroll
- 2. Debtors
- 3. Creditors
- 4. Cash Receipts
- 5. Cash Payments
- 6. General Journals eg. Float Allocation. SIDA, FPIA and Leprosy Allocations.
- 7. Stores transactions (not yet implemented).

Before moving on to discuss each of these inputs let us examine the coding structure which the computer General Ledger uses. The coding structure is split into two parts:-

- a) The Cost Centre where money is spent
 - where money is received
 - balance sheet entries

The Cost Centre consists of two digits e.g. ch = Community Health

- b) The Account Code what the money has been spent on
 - what income has been received
 - what the balance sheet entries relate to

The account code consists of six digits e.g. 511000 = food.

The data processing manager will be responsible for issuing all new account codes.

Because we are so far advanced into the financial year it is not worth trying to analyse the accounting entries which have been recorded so far this year into the detail which is available through the computer coding structure.

Non Staff

Mary Smith

BS 115013

At the end of each month the procedure will be as follows:-

- a) Total and Balance Sales day book
- b) Record credit notes raised in Sales day book
- c)* Record payroll deductions for debtors for month
- d) Post totals of invoices/credit notes to accounts in the debtors ledger
- e) Post payments received including salary deductions to accounts in the debtors ledger.
- f) Reconcile accounts to the control totals
- g) Prepare journal voucher inputs for computer (see Appendix 2)
- * Only the Credit Controller can advise the payroll department to make deductions for debtors from payroll.

3. CREDITORS

Just as with debtors the coding structure for creditors can be used to accommodate an account code for each creditor $e \cdot g \cdot$

Creditors Control BS 201000 Metro Pharmacy BS 201056 Pfizer Laboratory BS 201066

At the end of the month the procedure will be as follows:-

- a) Total and balance Creditors day book
- b) Record debit notes raised in Creditors day book
- c) Post invoices/debit notes to accounts in the Creditors Ledger
- d) Post payments made to accounts in the Creditors Ledger
- e) Reconcile accounts to the control totals
- f) Prepare journal voucher inputs to the computer(see Appendix 3)

4. CASH RECEIPTS

Cash receipts are relatively straight-forward in that there are only a limited number of income account codes currently being used.

The month end procedure will be:-

- a) Reconcile cash receipts book
- b) Post accounts to manual ledger
- c) Prepare journal voucher inputs to the computer (see Appendix 4) to include a summary entry for:-
 - (a) Total Cash Receipts
 - (b) Total Bank Receipts

5. CASH PAYMENTS

Cash payments are once again relatively straight forward. The month end procedure is similar to cah receipts:-

- a) Reconcile cash payments book
- b) Post accounts to manual General Ledger
- c) Prepare journal voucher inputs to the computer (see Appendix 5) to include a summary entry for:-
 - (1) Total Cash Payments
 - (2) Total Bank Payments

6. GENERAL JOURNALS

General journals are any other inputs to the General Ledger other than those outlined above. The only exception to this is stock issued which are not an input to the ledger system at the moment and which are discussed later in this paper.

General Journals can be used to correct errors by transferring from one account code to another, to allocate expenditure against the projects (leprosy, FPIA, SIDA) or to perform any adjustments to the ledger which are approved and need to be actioned. (An example of a General Journal is shown as Appendix 6).

7. SUMMARY

The computerised General Leger is therefore no different from the manual General Ledger in that it has the same inputs. The way that it does differ is that:-

- a) All accounts must now have cost centres and account codes in order that the computer can store the data, perform calculations on the data and present the information required by management in the most suitable format.
- b) We will now be working to a computer timetable by which date data required by the computer must by ready.

It is worth restating that the introduction of the computer system will involve extra work in the early stages. However once the system is established and working well it will save us much of the tedious and boring manual work which is done at the minute.

Bear in mind that all new computer systems take a little time to become established and develop a routine. We must be prepared to face problems as they arise and to put in the effort to overcome any difficulties.

At the end of the day the effort which we make now will be well worth while.

THE COMPUTERISED GENERAL LEDGER

HAVING ESTABLISHED THE SYSTEM HOW CAN WE IMPROVE IT?

It is clear that until we start to use the cost centres and account codes to analyse in more detail our income and expenditure we will not be making the best use of our computer system. Better information will enable us to manage better:-

- e.g. how much does staff salaries cost us each month in the kitchen, laundry, maintenance department, pharmacy department or Shindda Ward?
 - how much income do we get from each individual CHD clinic?
 - outpatients?
 - inpatients?
 - how much is spent individually on water, electricity, gas?

This information can be provided through the computer system but in order to get it out we must first put it in.

Our present method of working whereby we analyse at the end of each month income and expenditure in even greater detail would cause even more work and consequently take more time.

The solution to this problem is therefore to code as much data as possible during the month and input this to the computer and not wait until the end of the month. Let us examine some possible ways of achieving this for the various inputs to the General Ledger.

1. CASH RECEIPTS

It is possible to obtain cash book loose leaf forms which enable receipts to be coded at source (see Appendix 7). The forms are in duplicate, one stays in the Cash Book the other is used as a computer input document.

This method avoids the problem of preparing a summary analysis of cash receipts at the month end.

2. CASH PAYMENTS

A similar system to that outlined for cash receipts could be used for cash payments.

A cheaper but less effective alternative to buying new stationery would be to simply record each transaction on a computer journal voucher as we proceed through the month. Each page (or every two pages) in the Cash Book could be balanced to the journal voucher which is then passed to the Computer Section for punching.

CREDITORS

Creditors could be input to the ledger in a number of ways. Let us look at just two:-

- 1. a. Design a stamp along the lines shown in Appendix 8.
 - b. As each invoice is posted in the Day Book stamp the back and fill in details of creditors no., account code, and amount payable.
 - c. At the end of each week the invoices would be batched, totalled and passed to the computer for processing.
 - ${\tt d.}$ The data input operator would credit the amount to the creditor number and debit the appropriate account code.
 - e. For each batch a further accounting entry would be needed to credit the creditors control account and debit the general ledger control account.
- Instead of stamping each invoice prepare a weekly data input sheet showing the same detail as on the stamp.

4. DEBTORS

Debtors could be actioned as per the methods set out above for creditors. It would not however be advisable to delay sending out invoices pending input to the computer. The option of using a weekly data input sheet could therefore be considered until such time as the invoice books are printed. A reprinted invoice should provide for four sets of each invoice (currently three) which incorporates a section for coding. The additional copy would be used as a computer input document.

5. PAYROLL

The largest single block of expenditure which Chogoria has is wages. It is vital therefore that we break down this large block of expenditure and allocate it to cost centres. Mr Nkonge has allocated each individual employee a cost centre/account code number on each payroll record. To analyse the expenditure manually would be extremely time consuming and possibly inaccurate. The payroll module of the Omicron system is not yet available and therefore some form of local system consisting of a database of:-

- 1. Employee's name
- 2. Payroll number
- 3. Cost centre/account code
- 4. Gross pay + NSSF (total employer's cost)

should be constructed and updated each month.

6. STORES

One other area of the accounts which needs to be brought into the General Ledger is that of stores issues.

Currently all items for stores are written off as expenditure and we need therefore to:-

a) Establish account codes for each stores viz.

Pharmacy Food General

(these are already set up in the computer system).

- b) Allocate all stores invoices and cash purchases to the correct stores account.
- c) At the end of each month debit expenditure accounts with the total stores issues and credit the stores accounts.
- d) A reconciliation between the ledger stock control account and the stock account total in the stores module should be made each month.

CONCLUSION

There is therefore a lot of work to be done to improve the computerised General Ledger system. We have made a good start but effort must be continued if we are to move forward and progress. A word of caution — do not try to move forward on all fronts at once. It is advisable to improve one input to the General Ledger at a time and to make sure that it is working before moving on.

Good luck!

FINANCIAL PROCEDURES MANAUAL

VOUCHER PAYMENTS

1. REGISTRATION

All patients paying by voucher will deposit their voucher with the Registration Clerk. These will be recorded in the voucher book to show:

- (a) Member's Name
- (b) Patient's Name
- (c) Society (or Organisation)
- (d) Voucher Amount
- (e) Voucher Number
- Vouchers will be forwarded from registration to the General Office (till No. 2) at regular intervals during the course of the day.
- 3. Till No. 2 when a voucher patient presents at till No 2 the voucher will be given a hospital number. This number will be recorded in the voucher book kept till No.2 together with the following:
 - (a) Member's Name
 - (b) Patient's Name
 - (c) Society (or Organisation)
 - (d) Voucher Amount
 - (e) Voucher Number

If the voucher holder is an outpatient the clerk will also record on the voucher the amount which the patient is to be charged.

- 4. Patients admitted to hospital will also be recorded in the voucher book for these patients the clerk will indicate "I/P" on the form before giving the voucher to the patient to take to the inpatient clerks.
- 5. The inpatient clerks will incorporate the voucher details on the patient's invoice. These vouchers will remain with the inpatients clerks for collection and reconciliation with the voucher book (till No. 2) at the end of the day.
- 6. The total of the voucher payments will be recorded in the daily record of the vouchers charged.
- 7. Invoices at the beginning of the day invoicing clerk(s) will sort out the previous days vouchers into:
 - (a) Society
 - (b) Inpatient/Outpatient within Society
- 8. Inpatients will be filed on the appropriate file

- Outpatients will be invoiced immediately and then filed on the completed file for that Society. This work will take place during the morning of each day.
- 10. During the afternoon the invoicing clerk(s) will liaise with the inpatient clerks to agree those patients who have been discharged. The appropriate amount will then be invoiced and the voucher transferred from the inpatient to the completed file for that Society.

MEMORANDUM

TO: Dr Scott A Murray

FROM: M Lincoln

KITCHEN - FOOD ALLOCATIONS

1. CURRENT PROCEDURE FOR ALLOCATING FOOD TO THE KITCHEN

Each ward fills a ward diet request form which shows the total number of patients, number of private patients, special diets etc.

This is forwarded to the kitchen who total the patients, add on an allocation for students (standard 130) and night staff (standard 24). The stores then issue fixed amount of food (Beans, Rice etc) based on these total numbers.

2. DISCREPANCIES - NIGHT STAFF AND STUDENTS

The night staff allowance (24) includes for 18 students which are also included in the issue for students (130). This has been pointed out to the Kitchen Manager who has agreed to adjust.

3. DISCREPANCIES - PRIVATE PATIENTS

Private patient numbers are being added from the diet sheets $\underline{\text{in addition}}$ to the total number of patients shown on the ward. I visited the wards with the Kitchen Manager in order to covince him on this fact. He has agreed to adjust his figure in future. The average number of private patients shown of the diet request sheets is between 20 and 30 (say 25).

4. DISCREPANCIES - PATIENT NUMBERS

Appendix A shows a cross section of patient numbers extracted from:

- A) Bed State Figures
- B) Diet Request Forms
- C) Kitchen Issue Sheets

The figures show that there is a clear pattern of overissuing food against actual numbers of patients in beds. There will always be a discrepancy (which should be small) between Bed States and Diet Request Sheets due to a degree of estimation. There is however no excuse for a continued deviation from Diet Request Sheets against figures issued by the kitchen to the stores (approx 50 patients per day on figures shown).

These discrepancies are easily controlled by the administrator checking the Bed State Figures against the Kitchen Issue Sheet before signing.

5. ESTIMATED COST OF DISCREPANCIES

Total Food Bill 1985

Ksh. 000 1,866

Less allowance for tea and other issues

 $\frac{(166)}{1,700}$

No. of Diet Days:

Inpatient Days Student Days

Night Nurses

87,700 47,500 2,200

Cost per Diet per day 1700/137.4 = 12/-

A) Savings from Night/Staff Students (Double counted) $18 \times 365 \times 12/- = 78,840$

B) Savings from Private Patients (Double counted) $25 \times 365 \times 12/- \underbrace{109.500}_{188,340}$

C) Savings from monitoring patient numbers (say 30 per day) 30 x 365 x 12/- 131,400

TOTAL SAVING 319,740
